

- Eliminates illegible handwriting, links related records electronically, reduces data entry errors, and helps eliminate missing or required patient information.

- User friendly graphic interface that allows for fast and easy access to patient information and hassle free data entry.

“Medical Records Database is one of the most effective tools for managing patient information I have used. The Task Tracking is especially useful in assuring patients have recommended follow-ups. Having all medications, allergies, patient visits and vitals at my finger tips saves time and makes for a more effective visit.”—Teresa C. (ARNP)

REQUIREMENTS

- Windows operating environment.
- Network access if running the system on multiple computers.
- Adobe Acrobat Standard is recommended to allow printing of PDF files.
- Microsoft Access (full) to allow system changes outside of the built-in parameters of the program.

MEDICAL RECORDS DATABASE

Allowing you to provide improved patient care, while at the same time reducing expenses, increasing efficiency and potentially lowering exposure to malpractice claims.

WHY THIS EMR?

- User friendly graphic interface.
- No licensing required. Install the system on any computer in your office
- No annual fee.
- On site training available.
- Local support.
- Specifically designed for the Spokane, Washington health care community with an extensive list of area pharmacies and providers.
- Extensively tested in a working clinical environment.
- Increased profitability.

“Everything is at your fingertips!” - Lana K. (CMA)

BENEFITS

- A “paperless” environment allows you to reduce office space required for charts, thus allowing you to recover that space for other purposes.
- Reduce the potential litigation due to missed follow-ups on labs, diagnostics and referrals by utilizing our easy to use Patient Task Tracking system
- Complete dictation while in the room, allowing for instant availability of patient reports for referrals.
- No more hunting for charts! Staff can access the same chart simultaneously.

- Easily comply with requirements and guidelines regarding electronic records.
- Print a complete chart with the click of a button.

“I am not a computer person. I normally feel very nervous when I use them, but with this program I was completely comfortable.” - Amy S. (Administrative Assistant)

- Does not require extensive computer skills.
- Print prescriptions directly from the database with pre-population of patient demographics as well as saving a copy in the database for future refills.
- Makes obtaining prior authorizations easier by tracking medication trials and failures.
